

## **Version 5**

For the study feature, typing in a flashcard set name that does not exist does not display an error message. (fixed in version 8)

In the flashcard app window, the stop button does not close the window. (fixed in version 8)

The instructions and what the buttons do are not clear. (fixed in version 8)

## **Version 6**

For the study feature, typing in a flashcard set name that does not exist still does not display an error message.

The stop button while studying still does not work.

## **Version 7**

Flash card set does not exist error message still doesn't work

After removing all the flash cards from a set the application does not close. (fixed in version 8)

## **Version 8**

The stop button in the flashcard app study feature now works. The fix was to change `.quit()` to `.destroy()`, `destroy` closes the current window and is better to use.

Removing all images from the set closes the program correctly, the fix for this was the same, changed `.quit()` to `.destroy()`

Got the error message to work when an empty folder or a folder with no supported images was selected. The fix was to make an if statement in the `create_flashcard_set` function where if the images list was empty, meaning no supported images paths had been added to it, the error message would display.

Made the buttons and text clearer. Added more context to what they do and added the supported image format list.
